

Donor Skin Disinfection

捐血者皮膚消毒

Individual packed povidone iodine swab

獨立包裝碘酒消毒紙

- First disinfect the intended venepuncture site using povidone iodine for 30 seconds
- 先以碘酒為捐血部位消毒三十秒

Individual packed alcohol swab

獨立包裝酒精消毒紙

- Then disinfect the same site using alcohol for another 30 seconds
- 再以酒精為捐血部位消毒三十秒

Blood Collection

血液收集

New and sterilized blood bag

全新已消毒的捐血袋

First 30 ml of donated blood will be collected into a sampling pouch for blood test

首三十毫升血液捐贈會先採集至分流小袋作化驗
