    ${ }^{()}$Figures in brackets denote percentage changes as compared with the same period of the preceding year.

[^1]:    Notes: \# Provisional figures.
    ${ }^{(1)}$ The quarter-to-quarter rates of change in the business receipts indices (BRIs) of selected service industries/domains are derived based on the seasonally adjusted series to reflect the underlying trend of business receipts. These seasonally adjusted BRIs are compiled using the X-12 ARIMA method, which is a standard method applied in compiling seasonally adjusted statistical data series.
    ${ }^{(2)}$ Seasonally adjusted series may be revised as more data become available. The seasonally adjusted BRIs will be revised annually when the figures for the first quarter of the current year are published.
    ${ }^{(3)}$ The BRIs of a few service industries are found to have no identifiable seasonality in the seasonal adjustment exercise. Seasonal adjustment is therefore not applied to the BRIs of these industries.
