| :---: | :---: | :---: |

| 2 | +0.7 | +1.1 |
|  | 2 | +0.5 |

Notes: * Provisional figures.
(1) Figures refer to percentage changes over the same quarter in the preceding year.
(2) The seasonally adjusted series is compiled using the X-12 ARIMA method, which is a standard method applied in compiling seasonally adjusted statistical data series. For the quarterly volume index of total restaurant receipts, its seasonally adjusted series for the preceding three years is revised each year when the figures for the first quarter are published. For the monthly volume index of total restaurant receipts, seasonal adjustment will be performed when a longer data series is available in future.
(3) Figures refer to percentage changes over the preceding quarter.
