Notes :

1. Figures for the third quarter of 2011 were provisional figures.
2. The seasonally adjusted series is compiled using the X-12 ARIMA method, which is a standard method applied in compiling seasonally adjusted statistical data series.

For the quarterly volume index of total restaurant receipts, its seasonally adjusted series for the preceding three years is revised each year when the figures for the first quarter are published.

For the monthly volume index of total restaurant receipts, seasonal adjustment will be performed when a longer data series is available in future.
