Notes :

1. Figures for the second quarter of 2013 were provisional figures.
2. The seasonally adjusted series is compiled using the X-12 ARIMA method, which is a standard method applied in compiling seasonally adjusted statistical data series.
 For the quarterly indices of total restaurant receipts, the seasonally adjusted series for the preceding 3 years is revised each year when the figures for the first quarter are published.
 For the monthly indices of total restaurant receipts, seasonal adjustment will be performed when a longer data series is available in future.
