^{*} Provisional figures.

⁽¹⁾ Figures refer to percentage changes over the same quarter in the preceding year.

⁽²⁾ The seasonally adjusted series is compiled using the X-12 ARIMA method, which is a standard method applied in compiling seasonally adjusted statistical data series. For the quarterly indices of total restaurant receipts, the seasonally adjusted series for the preceding 3 years is revised each year when the figures for the first quarter are published. For the monthly indices of total restaurant receipts, seasonal adjustment will be performed when a longer data series is available in future.

⁽³⁾ Figures refer to percentage changes over the preceding quarter.
