

**Volume/Capacity ratio of the Lantau Link
during morning peak hours (eastbound and westbound) in 2021
in the scenario without the TM-CLKL**

Year	Peak hour	Volume/Capacity (V/C) ratio ^{Note 1}
2021	Morning (eastbound)	0.75
	Morning (westbound)	0.90

Note 1: V/C ratio is an indication of the traffic conditions of roads during peak hours. A v/c ratio equals to or less than 1.0 is considered acceptable. A v/c ratio between 1.0 and 1.2 indicates a manageable degree of congestion. A v/c ratio above 1.2 indicates more serious congestion.
