Notes: # Provisional figures.

- (1) The quarter-to-quarter rates of change in the Business Receipts Indices (BRIs) of selected service industries/domains are derived based on the seasonally adjusted series to reflect the underlying trend of business receipts. These seasonally adjusted BRIs are compiled using the X-12 ARIMA method, which is a standard method applied in compiling seasonally adjusted statistical data series.
- (2) Seasonally adjusted series may be revised as more data become available. The seasonally adjusted BRIs of the retail industry will be revised annually when the figures for the fourth quarter of the current year are published, while those of the other service industries will be revised annually when the figures for the first quarter of the following year are published.
- (3) Accommodation services cover hotels, guesthouses, boarding houses and other establishments providing short term accommodation.
- (4) The BRIs of a few service industries are found to have no clear seasonal patterns in the seasonal adjustment exercise. Seasonal adjustment is therefore not applied to the BRIs of these industries.
- (5) The coverage of the real estate industry has been enhanced since the reference quarter of Q1 2019 and the new series has been backcasted to Q1 2012. The old series with 2008 as the reference year with the relevant figures compiled up till Q4 2019 can be provided to users upon request, if needed.
