

Table Title: Gini Coefficients for 2001, 2006 and 2011

The Gini Coefficient based on original household income of all domestic households in 2001 was 0.525.

The Gini Coefficient based on original household income of all domestic households in 2006 was 0.533.

The Gini Coefficient based on original household income of all domestic households in 2011 was 0.537.

The Gini Coefficient based on original household income of all domestic households in 2006 increased 0.008 when compared with 2001.

The Gini Coefficient based on original household income of all domestic households in 2011 increased 0.004 when compared with 2006.

The Gini Coefficient based on post-tax household income of all domestic households in 2001 was 0.515.

The Gini Coefficient based on post-tax household income of all domestic households in 2006 was 0.521.

The Gini Coefficient based on post-tax household income of all domestic households in 2011 was 0.521.

The Gini Coefficient based on post-tax household income of all domestic households in 2006 increased 0.006 when compared with 2001.

The Gini Coefficient based on post-tax household income of all domestic households in 2011 remain unchanged when compared with 2006.

The Gini Coefficient based on post-tax post-social transfer household income of all domestic households in 2001 was 0.470.

The Gini Coefficient based on post-tax post-social transfer household income of all domestic households in 2006 was 0.475.

The Gini Coefficient based on post-tax post-social transfer household income of all domestic households in 2011 was 0.475.

The Gini Coefficient based on post-tax post-social transfer household income of all domestic households in 2006 increased 0.005 when compared with 2001.

The Gini Coefficient based on post-tax post-social transfer household income of all domestic households in 2011 remain unchanged when compared with 2006.

The Gini Coefficient based on post-tax post-social transfer per capita household income of all domestic households in 2001 was 0.421.

The Gini Coefficient based on post-tax post-social transfer per capita household income of all domestic households in 2006 was 0.427.

The Gini Coefficient based on post-tax post-social transfer per capita household income of all domestic households in 2011 was 0.431.

The Gini Coefficient based on post-tax post-social transfer per capita household income of all domestic households in 2006 increased 0.006 when compared with 2001.

The Gini Coefficient based on post-tax post-social transfer per capita household income of all domestic households in 2011 increased 0.004 when compared with 2006.

The Gini Coefficient based on post-tax post-social transfer including the one-off government relief measures per capita household income of all domestic households in 2011 was 0.414.

The Gini Coefficient based on post-tax household income of all domestic households in 2001 reduced by 0.010 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on post-tax household income of all domestic households in 2006 reduced by 0.012 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on post-tax household income of all domestic households in 2011 reduced by 0.016 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on post-tax post-social transfer household income of all domestic households in 2001 reduced by 0.055 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on post-tax post-social transfer household income of all domestic households in 2006 reduced by 0.058 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on post-tax post-social transfer household income of all domestic households in 2011 reduced by 0.062 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on post-tax post-social transfer per capita household income of all domestic households in 2001 reduced by 0.104 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on post-tax post-social transfer per capita household income of all domestic households in 2006 reduced by 0.106 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on post-tax post-social transfer per capita household income of all domestic households in 2011 reduced by 0.106 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on post-tax post-social transfer including the one-off government relief measures per capita household income of all domestic households in 2011 reduced by 0.123 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on original household income of economically active households in 2001 was 0.488.

The Gini Coefficient based on original household income of economically active households in 2006 was 0.490.

The Gini Coefficient based on original household income of economically active households in 2011 was 0.489.

The Gini Coefficient based on original household income of economically active households in 2006 increased 0.002 when compared with 2001.

The Gini Coefficient based on original household income of economically active households in 2011 reduced 0.001 when compared with 2006.

The Gini Coefficient based on post-tax household income of economically active households in 2001 was 0.476

The Gini Coefficient based on post-tax household income of economically active households in 2006 was 0.477.

The Gini Coefficient based on post-tax household income of economically active households in 2011 was 0.470.

The Gini Coefficient based on post-tax household income of economically active households in 2006 increased 0.001 when compared with 2001.

The Gini Coefficient based on post-tax household income of economically active households in 2011 reduced 0.007 when compared with 2006.

The Gini Coefficient based on post-tax post-social transfer household income of economically active households in 2001 was 0.436.

The Gini Coefficient based on post-tax post-social transfer household income of economically active households in 2006 was 0.436.

The Gini Coefficient based on post-tax post-social transfer household income of economically active households in 2011 was 0.430.

The Gini Coefficient based on post-tax post-social transfer household income of economically active households in 2006 remain unchanged when compared with 2001.

The Gini Coefficient based on post-tax post-social transfer household income of economically active households in 2011 reduced 0.006 when compared with 2006.

The Gini Coefficient based on post-tax post-social transfer per capita household income of economically active households in 2001 was 0.412 .

The Gini Coefficient based on post-tax post-social transfer per capita household income of economically active households in 2006 was 0.412.

The Gini Coefficient based on post-tax post-social transfer per capita household income of economically active households in 2011 was 0.413.

The Gini Coefficient based on post-tax post-social transfer per capita household income of economically active households in 2006 remain unchanged when compared with 2001.

The Gini Coefficient based on post-tax post-social transfer per capita household income of economically active households in 2011 increased 0.001 when compared with 2006.

The Gini Coefficient based on post-tax post-social transfer including the one-off government relief measures per capita household income of economically active households in 2011 was 0.399.

The Gini Coefficient based on post-tax household income of economically active households in 2001 reduced by 0.012 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on post-tax household income of economically active households in 2006 reduced by 0.013 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on post-tax household income of economically active households in 2011 reduced by 0.019 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on post-tax post-social transfer household income of economically active households in 2001 reduced by 0.052 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on post-tax post-social transfer household income of economically active households in 2006 reduced by 0.054 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on post-tax post-social transfer household income of economically active households in 2011 reduced by 0.059 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on post-tax post-social transfer per capita household income of economically active households in 2001 reduced by 0.076 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on post-tax post-social transfer per capita household income of economically active households in 2006 reduced by 0.078 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on post-tax post-social transfer per capita household income of economically active households in 2011 reduced by 0.076 when compared with the Gini Coefficient based on original household income.

The Gini Coefficient based on post-tax post-social transfer including the one-off government relief measures per capita household income of economically active households in 2011 reduced by 0.090 when compared with the Gini Coefficient based on original household income.
