\* Provisional figures.

- (1) Figures refer to percentage changes over the same quarter in the preceding year.
- (2) The seasonally adjusted series is compiled using the X-12 ARIMA method, which is a standard method applied in compiling seasonally adjusted statistical data series. The series may be revised as more data become available. For the quarterly indices of total restaurant receipts, the seasonally adjusted series for the preceding 3 years is revised each year when the figures for the first quarter are published.
- (3) Figures refer to percentage changes over the preceding quarter.
