Note :

- (1) SOP (clinical) attendances also include attendances from nurse clinic in SOP setting.
- (2) GOP attendances include attendances for doctor consultations, attendances from nurse clinic in GOP setting and attendances in related healthcare reform initiative programmes in primary care.
- (3) In HA, day inpatients refer to those who are admitted into hospitals for non-emergency treatment and who are discharged within the same day. Inpatients are those who are admitted into hospitals via A&E Department or those who have stayed for more than 1 day.

Note :

In HA, day inpatients refer to those who are admitted into hospitals for non-emergency treatment and who are discharged within the same day. Inpatients are those who are admitted into hospitals via A&E Department or those who have stayed for more than 1 day. The calculation of the number of hospital beds includes that of both inpatients and day inpatients. The calculation of inpatient bed occupancy rate, on the other hand, does not include that of day inpatients.

In view of the emergence of the Coronavirus Disease 2019 epidemic in Hong Kong since early 2020, HA has adjusted its services in response to the epidemic along with tightening up infection control measures. This should be taken into account when comparing the throughput of services provided by HA across the years.

	Full-time Attrition Rate (1 Jan 2021 to 31 Dec 2021)	Cumulative Shortfall
Doctors	6.9% (Equivalent to 436 full-time doctors)	Around 260 (2020-21)
Nursing	8.2% (Equivalent to 2 240 full-time nurses)	-
Allied Health Professionals	7.6% (Equivalent to 662 full-time allied health professionals)	-

The attrition rate of full-time physiotherapists, occupational therapists and radiographers (diagnostic) are 10.8%, 9.9% and 8.2%, equivalent to 134, 96 and 81 allied health professionals respectively.

Note: The figures above include all clusters and Head Office

(vi)

**Recurrent budget allocation in respect of each cluster of the Hospital Authority (HA)
in 2019-20, 2020-21 and 2021-22 (projection as of 31 December 2021)**

Year	HKEC	HKWC	KCC	KEC	KWC	NTEC	NTWC
	(\$ billion)						
2019-20	6.91	7.18	14.16	7.33	11.05	10.73	9.52
2020-21	7.57	7.59	15.32	8.10	12.10	11.59	10.32
2021-22 (projection as of 31 December 2021)	7.72	7.85	15.78	8.40	12.73	12.08	10.64

Note :

- (1) The recurrent budget allocation as shown in the table above represents the funding allocated to clusters for supporting their daily operational needs, such as staff costs, drugs expenditure, medical supplies and utilities charges, etc. The 2020-21 and 2021-22 budget allocation to clusters have also incorporated the additional Government funding to HA to combat the Coronavirus Disease 2019 epidemic. On top of the recurrent budget allocation, each cluster has other incomes, such as fees and charges collected from patients for healthcare services rendered, which will also contribute to supporting the cluster's day-to-day operation. The above does not include capital budget allocation such as those for capital works projects, major equipment acquisition, and corporate-wide information technology development projects, etc.
- (2) The resource needs of a cluster depend not only on the size and demographics of the population residing within its catchment districts, but also on other factors such as service demand generated from cross-cluster movement of patients and the provision of designated services (such as liver transplantation). As such, the scope of hospital facilities and expertise available in different clusters also vary. Therefore, budget allocation to individual clusters is not directly comparable.
