

**Priority Areas for
the 2022 Funding Exercise of
Beat Drugs Fund (BDF) Regular Funding Scheme (RFS)**

Treatment and Rehabilitation (T&R)

- (a) Projects that comprise targeted treatment and outreaching programmes which take into account the latest demographic characteristics of drug abusers and cater for their varying needs in quitting drugs. They may include cannabis abusers; young adult drug abusers (aged 21 – 35) who could be tertiary students, working adults, professionals or the non-engaged; ethnic minority drug abusers; pregnant drug abusers/drug-abusing parents; men who have sex with men with drug abuse problem, etc.

- (b) Projects that promote the involvement of family members of drug abusers in the T&R process. Relationship between drug abusers/rehabilitees and their family members could be fragile and challenging. On the other hand, family support is pivotal throughout the T&R process. Involvement of family members of drug abusers could help engage hidden drug abusers, strengthen the motivation of drug abusers to quit drugs and maintain abstinence, rebuild family relationship, render emotional support to drug abusers/rehabilitees in the T&R process, as well as prevent inter-generational drug abuse patterns.

- (c) Projects that involve and strengthen collaboration among various sectors and disciplines as well as at various levels to help identify and engage drug abusers and help them quit drugs, especially those involving “Ice”, cocaine, cannabis and/or ketamine abuse. Drug abusers of various backgrounds encounter multi-faceted needs straddling health and emotion, employment and family, etc. Strengthened collaboration involving different key players such as community-based service units, residential drug treatment and rehabilitation centres, medical service units, law enforcement agencies, other welfare service units as well as non-drug social service and community units are encouraged to facilitate concerted efforts for effective delivery of drug treatment.

- (d) Projects that facilitate early identification of drug abusers and intervention through adoption of innovative means and wider use of technology. Amid the evolving social environment and changing lifestyles, there is a need for adoption of innovative means and wider use of technology for identifying, engaging and reaching out to, amongst others, hidden drug abusers, and also providing T&R services and other support.
- (e) Projects that strengthen or provide early medical intervention and support to drug abusers, especially those with drug-induced psychiatric and/or severe emotional issues, to manage their withdrawal symptoms and stabilise their mental condition which is essential and complementary to more effective drug treatment. Such medical intervention and support could involve treatment in a hospital/clinical setting or in an outreaching mode.
- (f) Projects that strengthen aftercare services for those who have successfully quitted drugs so as to minimise relapse, facilitate reintegration into society and enhance their employability. Examples include counselling and life planning at post-treatment stage, occupational therapies, vocational training, provision of job placement opportunities, job counselling, mentoring programmes, etc., with a view to helping them settle in stable employment, enhance their self-recognition and self-esteem, thus empowering them to resist the temptation of drugs and stay abstinence.
- (g) Projects that provide structured training or platforms for experience sharing on drug-quitting therapeutic approaches among anti-drug social workers, peer counsellors who are drug rehabilitees, medical professionals and related personnel to equip them with the necessary skills and knowledge for helping cannabis abusers and also complex cases involving other psychotropic substances to quit drugs and remain drug free. These projects may also involve other relevant streams of social or medical services to help foster a better understanding of the needs of drug abusers, and share good practice or techniques in helping them quit drugs.

Preventive Education and Publicity

- (h) Projects that mobilise the community to stand against cannabis (including tetrahydrocannabinol (THC) and cannabidiol (CBD) products) taking into account the latest legal requirements, particularly through raising awareness, providing correct information and rectifying mistaken concepts about the drug, helping identify cannabis products, countering the legalisation advocacy, and addressing the challenges presented by the relaxation on the legal use of cannabis in some foreign jurisdictions among members of the public, especially young people, parents and specific target groups.
- (i) Projects that enhance awareness of the harms of other popular drugs, such as cocaine, “Ice” and ketamine, among members of the public, especially young people, parents and specific target groups, particularly through promoting attitudinal change towards drugs, building a drug-free culture, encouraging early help-seeking and facilitating identification of hidden drug abusers.
- (j) Projects that enhance the awareness of families, especially at-risk families (e.g. teenage mothers, parents or family members being ex-drug abusers, and family members being high-risk youth), of drug harms, and strengthen the role and abilities of family members in preventing drug abuse, identifying and seeking help early for drug-abusing family members.
- (k) Projects that promote help-seeking, community acceptance of T&R services and facilities and reintegration of rehabilitees into society.
- (l) Projects that enhance the awareness of the dire consequences of engaging in drug trafficking activities among members of the public, especially young people.

Research

- (m) Researches on the characteristics of psychotropic substance abuse, particularly on psychotropic substances which have gained prevalence in Hong Kong such as “Ice”, cocaine, cannabis and other emerging drugs to provide more information about the drug harms and to identify suitable treatment methods for application in the Hong Kong’s context.
- (n) Researches on the behavioural patterns (e.g. reasons for hidden drug abuse, drug-taking subculture, relapse and its prevention, and impacts of inter-generational drug abuse) of different groups of drug abusers (e.g. female drug abusers, pregnant drug abusers, working drug abusers, and drug abusers of diverse race and sexual orientation).
- (o) Studies on identifying and collating good practices or protocols based on the findings of the completed BDF RFS research-type projects.
