

Figure 1 The view of new weather photos at Tai Mo Shan is wide (the distance between each location and the camera is shown in unit of kilometre. The weather photo was taken at around 5 p.m. on 17 November 2022). It depicted a layer of clouds extending over 10 kilometers wide. Estimated from the height of Pat Sin Leng, the height of cloud base in the photo was above 1000 metres, which generally matched the height of possible clouds as suggested in the upper-air weather data that night (Figure 2).

**Vertical Variation of Air Temperature, Dew Point Temperature, Wind Speed and Wind Direction (0 - 5,000m) at 20 HKT on 17/11/2022**

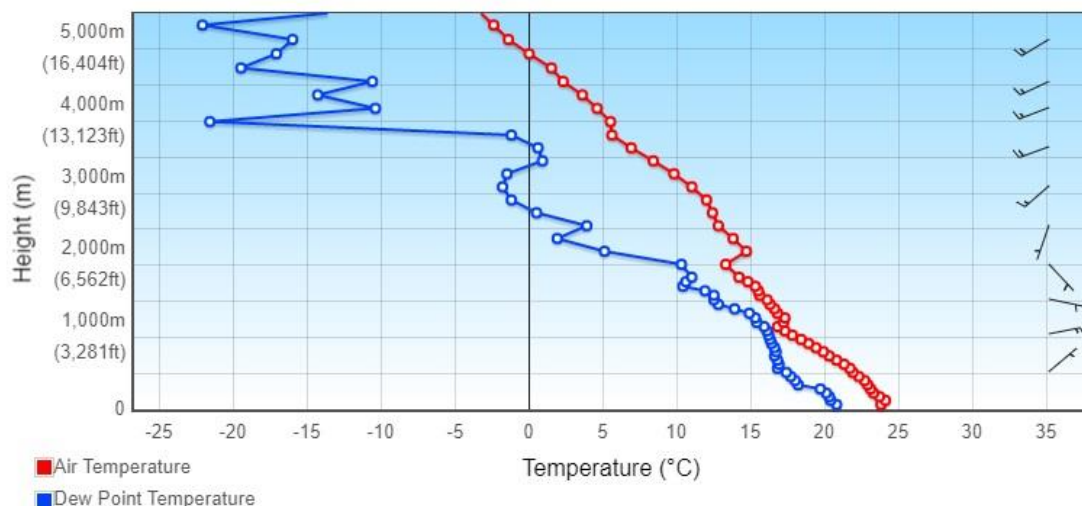

Figure 2 As shown in the upper-air weather data at the night of 17 November 2022, the air and dew point temperatures at around 1000 m height were very close to each other, suggesting the possible presence of clouds. This height generally matched the cloud base height over Pat Sin Leng observed at around 5 p.m. in Figure 1.
