

Figure 1 The Hong Kong Observatory has added real-time weather photos at the Hong Kong Maritime Museum at Central Pier today (December 13). The newly added weather camera has a wide field of view looking towards the east, facilitating the observation of weather affecting the areas around Victoria Harbour (The distance between each location and the camera is shown in unit of kilometre. The weather photo was taken at around 5pm on July 13, 2023).

Figure 2 At around 7pm on August 17, 2023, the weather camera captured the “corona” (indicated by the arrow). When sunlight is diffracted by small water droplets or ice particles in thin clouds, one or more sequences of coloured rings centred around the Sun, forming a “corona”.

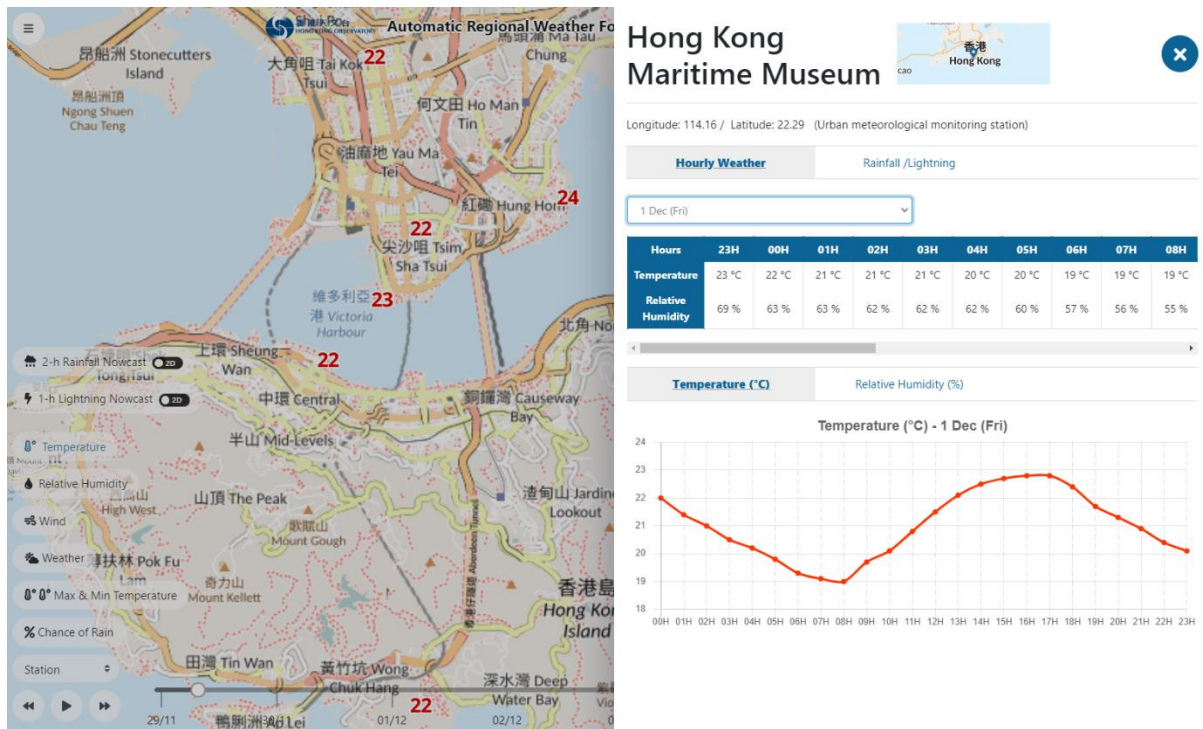

Figure 3 The “Automatic Regional Weather Forecast in Hong Kong & Pearl River Delta Region” service was enhanced with observations and forecasts of temperature and relative humidity at the urban meteorological monitoring station at the Hong Kong Maritime Museum.
