<sup>\*</sup> Provisional figures.

<sup>(1)</sup> Figures refer to percentage changes over the same quarter in the preceding year.

<sup>(2)</sup> The seasonally adjusted series is compiled by the X-12 ARIMA method. The X-12 ARIMA method and its related versions are the standard method commonly employed in compiling seasonally adjusted data series. Seasonally adjusted series may be revised as more data become available. For the quarterly indices of total restaurant receipts, the seasonally adjusted series for the preceding 3 years are revised each year when the figures for the first quarter are published.

<sup>(3)</sup> Figures refer to percentage changes over the preceding quarter.
