<b>Computer and information technology services</b>	+6.7%	+15.4%	-3.7%	+13.4%	-3.8%

Notes: # Provisional figures.

- (1) The quarter-to-quarter rates of change in the Business Receipts Indices (BRIs) of selected service industries/domains are derived based on the seasonally adjusted series to reflect the underlying trend of business receipts. The seasonally adjusted BRIs are compiled by the X-12 ARIMA method. The X-12 ARIMA method and its related versions are the standard method commonly employed in compiling seasonally adjusted data series. Seasonally adjusted series may be revised as more data become available. The seasonally adjusted BRIs of the retail industry will be revised annually when the figures for the fourth quarter of the current year are published, while those of the other service industries/domains will be revised annually when the figures for the first quarter of the following year are published.
- (2) The BRIs of a few service industries are found to have no clear seasonal patterns in the seasonal adjustment exercise. Seasonal adjustment is therefore not applied to the BRIs of these industries.
