Appendix 1

(Translation)

Hon Michael TIEN's motion on
"Actively dovetailing with national and global trends and studying the reform of the curriculum framework for primary and secondary schools"

Wording of the Motion

That in recent years, the global artificial intelligence ('AI') industry scale has shown explosive growth; our state leader has pointed out that 'AI is a strategic technology that will lead this round of scientific and technological revolution and industrial transformation', and that 'accelerating the development of a new generation of AI is a strategic issue that determines whether our country can seize the opportunities presented by the new round of scientific and technological revolution and industrial transformation', whereas the 2025-2026 Budget also devotes extensive coverage to AI-related proposals, including setting aside $1 billion for the establishment of the Hong Kong AI Research and Development Institute, showing the great importance attached to AI by the country and the SAR Government; for actively dovetailing with national and global trends as well as managing human development, this Council urges the SAR Government to study the reform of the curriculum framework for primary and secondary schools, so as to review whether the existing subjects can cope with the future development of AI in a timely manner and strengthen AI-related ethics education, such as on privacy security, copyright protection and safeguards against false information.
