

表2 二〇二六年一月的氣象數據與距平  
Table 2 Figures and Departures from Normal – January 2026

| 氣象要素<br>Meteorological Element                 | 本月數據<br>Figure of the month                   | 距平*<br>Departure from normal*                |                            |
|------------------------------------------------|-----------------------------------------------|----------------------------------------------|----------------------------|
|                                                |                                               | 比正常〔長期平均〕高<br>above normal                   | 比正常〔長期平均〕低<br>below normal |
| 平均日最高氣溫<br>Mean Daily Maximum Air Temperature  | 20.3 °C                                       | 1.6 °C                                       | ----                       |
| 平均氣溫<br>Mean Air Temperature                   | 17.5 °C                                       | 1.0 °C                                       | ----                       |
| 平均日最低氣溫<br>Mean Daily Minimum Air Temperature  | 15.4 °C                                       | 0.8 °C                                       | ----                       |
| 平均露點溫度<br>Mean Dew Point Temperature           | 9.9 °C                                        | ----                                         | 1.8 °C                     |
| 平均相對濕度<br>Mean Relative Humidity               | 63 %                                          | ----                                         | 11 %                       |
| 平均雲量<br>Mean Cloud Amount                      | 40 %                                          | ----                                         | 22 %                       |
| 總雨量<br>Total Rainfall                          | 毫米<br>3.2 mm                                  | ----                                         | 毫米<br>30.0 mm              |
| 總日照時間<br>Total Bright Sunshine Duration        | 小時<br>216.1 hours                             | 小時<br>70.3 hours                             | ----                       |
| 平均每日太陽總輻射<br>Mean Daily Global Solar Radiation | 兆焦耳/米 <sup>2</sup><br>14.46 MJ/m <sup>2</sup> | 兆焦耳/米 <sup>2</sup><br>3.91 MJ/m <sup>2</sup> | ----                       |
| 總蒸發量<br>Total Evaporation                      | 毫米<br>84.5 mm                                 | 毫米<br>15.4 mm                                | ----                       |

附註： 除日照、太陽輻射及蒸發量在京士柏氣象站記錄外，其他數據均在天文台錄得。  
Remarks: All measurements were made at the Hong Kong Observatory except sunshine, solar radiation and evaporation which were recorded at King's Park Meteorological Station.

\* 1991-2020 氣候平均值的距平。

\* Departure from 1991-2020 climatological normal.
