

## New Interface Design of the eHealth App

### **Personalised Home Page**

The “My Profile” and “Useful Tools” are placed on the home page, consolidating personalised health information, including a newly added to-do list, health management information and health programme details, while also displaying the users’ most frequently used functions for quick access.

### **“Health Journey” Function**

Users’ past health records and health programme details are displayed on a timeline, helping them keep track of their own health trajectory.
